Ginkgo-Ginseng Mix 4000

What is Ginkgo Biloba?

Ginkgo Biloba, also called “Fan Tree”, is a well-known tree species that is described as a “Living Fossil”. Ginkgo Biloba was already used in the Middle Ages for the treatment of asthma, bronchitis, frostbite, gonorrhoea, skin diseases, cough, stomach disorders, tuberculosis and restlessness. Today Ginkgo is mainly used to promote blood circulation, antioxidant and to treat a glaucoma concomitantly. It is said to have neuroprotective properties as well as a positive effect on memory performance.

Reasons for the possible positive effects of Ginkgo preparations are probably the high concentration of flavonoids and terpenoids in the materials used. The latter are a special form (Ginkgolid and Bilobalide) that can only be found in Ginkgo.

Korean Ginseng has been used as a cure in traditional medical medicine for thousands of years. It has been recognized by school medicine in the 20th century due to its proven effects as a healing plant. Ginseng was considered as a symbol for health and longevity. Another interesting factor is its blood flow promoting effect. It has been used for centuries to increase the potency power and is still one of the most important ingredients in many potency preparations in the world.
